"BEST IN THE WEST"

Brangus Bull and Female Sale

Saturday, February 9, 2019

12 Noon

Selling Females Followed by Bulls

Marana Stockyards

Marana, Arizona

Range Raised

Drought & Heat Tolerant

Alpha 7 – the only single-dose 7-way clostridial on the market; the right choice for branding time.

Pyramid 5 + Presponse SQ – the market-leading calf vaccine choice in the U.S.; use at branding, pre-weaning, weaning and/or post-weaning.

Express FP 10 – the best reproductive labeled vaccine on the market; the first vaccine to guarantee no PI calves.

Eprinex and LongRange – think you don't have a parasite problem or think all products yield the same results? Do your own on-farm trial and see the difference!

TERMS AND CONDITIONS

Except for the terms and conditions stated below, there are no warranties, either expressed or implied, as to the merchantability or fitness for a particular purpose with respect to the cattle being sold at this auction.

Terms of the sale are cash. Payments must be made in full to the cashier immediately following the sale. Checks made payable to Marana Stockyards & Livestock Market Inc.

A transferred certificate of registry will be furnished to the buyer for all registered animals and will be available within 75 days of sale provided that the current mailing address has been provided by the buyer.

DVM health certificates have been written for all animals in the sale.

The highest bidder is the buyer. If any dispute arises between two or more bidders, advancement of the bid will occur among the disputing bidders. If advancement doesn't occur, the animal shall go to the person whose bid the auctioneer last recognized. Decisions from the block by the auctioneer are final.

The buyer assumes all risks and expenses of the animal after the close of the bid by the auctioneer.

Bulls are guaranteed to have the ability to pass the breeding soundness examination at the time of the sale. All claims for infertility must be made in writing within 45 days of the sale. Animal will be returned at Buyers expense to seller. Any returned animal must have a veterinarian's certificate that documents the animal is healthy and free of Bangs, TB and Trich. Examination and laboratory tests are at the buyer's expense. Bulls are considered "acceptable breeders" if older than 18 months of age and settles cows by natural service and pregnancy results.

All effort has been made to insure correctness of the catalog. Southwest Brangus Breeders Association (SWBBA) assumes no responsibility for error or omissions. Any known corrections will be made from the sale block on the day of the sale and take precedence over the catalog.

All known defects of sale animals will be announced before the bidding begins.

SWBBA is not responsible for any injury, accident or illness sustained by persons attending the sale or by animals consigned.

Animals purchased at this sale will be loaded out following the sale. Transportation is the sole responsibility of the buyer.

Sale Sponsored by Southwest Brangus Breeders Association

President/Treasurer

Dr. Bart Carter, (928) 651-0881

Vice President • Eddie McClure

Secretary • Jeanette Pierce

The **Southwest Brangus Breeders Association (SWBBA)** is the regional association to which all registered consignors belong. Members are from Arizona, California, New Mexico, Nevada and Utah. The primary purpose of the group is to provide local and regional support for registered Brangus seedstock producers.

Take A Look At The IBBA Difference...

Membership in the International Brangus Breeders Association (IBBA) brings credibility. Total Herd Reporting (THR) is rapidly becoming the industry standard for reporting beef seedstock performance information and the IBBA is emerging as a leader in THR.

IBBA membership provides flexibility. Brangus, Red Brangus, Ultrablack, Ultrared, Brangus Gold...it's your choice. You choose the genetics that best fit your costumer's needs.

IBBA membership is full featured, not complex. The Brangus Automated Registry is the most advanced and user-friendly registry system in the industry.

IBBA membership provides access. IBBA is an active participant in the development of Multi-Breed EPDs and participates in the Beef Cattle Decision Support web-based software developed by Colorado State University and the National Beef Cattle Evaluation Consortium. Sorting and selecting genetics based on real economics, positions IBBA members and their customers for increased profitability.

IBBA membership is global. IBBA is an active member of the US Livestock Genetics Export, Inc. allowing members to leverage their ability to market IBBA genetics worldwide. IBBA currently provides services to breeders in Australia, Brazil, Columbia, Costa Rica and Mexico.

The IBBA began in 1949. This association is the repository of all the registry information for all the of black Brangus cattle and most of the red Brangus cattle in the US. Brangus cattle represent the unexcelled combination of Angus quality and Brahman hardiness. The blend of these two breeds; 5/8 Angus and 3/8 Brahman results in a breed that better combines efficiency of production and excellence of end product than any breed. The mission of the IBBA is "Preparing Brangus as the Commercial Cattle Breed of the 21st Century." IBBA empowers members to advance the quality, reliability and value of Brangus and Brangus influenced cattle; provides innovative programs and services which enhance the economic well-being of members and commercial customers. IBBA has adopted a Total Herd Reporting (THR) system that mandates that any registered animal be recorded and then be reported on each year. This is the primary distinction between "purebred" and registered is the registered animal has a documented pedigree, is enrolled in the THR program, is maintained each year by full disclosure and reporting and the owner or ranch is a member in good standing with IBBA. "Brangus" is a registered trademark owned by the IBBA.

Please visit www.GoBrangus.com for further information.

Please join us for the Annual Alex Dees Memorial Scholarship Fund Rollover Auction to be Held Before the Sale

This scholarship provides funds for youth, who participate in the Arizona Nationals Show, to continue their education after high school.

The recipient is chosen from written essays about their experience, regardless of winning a ribbon or not! It is a great experience for these participants and we would like to be able to offer this to more youth.

Your help and the help of your neighbors, friends and fellow breeders would be welcomed as well as greatly appreciated. So talk it up and bring all the donations you can with you to the sale!

We need to keep the youth involved in our industry, they are our future!

Thank you!

Expected Progeny Differences (EPDs)

Expected Progeny Difference (EPDs) is the best estimate of an animal's genetic merit for a particular trait. It takes into account the animals' own performance compared with its contemporaries and the performance of its relatives compared against their contemporaries.

Birth Weight (BW): predicts calf size and calving ease

Weaning Weight (WW): predicts preweaning growth potential.

Yearling Weight (YW): predicts overall growth potential.

Milk (MK): predicts the maternal contribution to weaning weight of the calf through milk production, behavior, immunity and other maternal environmental factors.

Total Maternal (TM): predicts weaning weight of calves from a bull's daughters

Scrotal Circumference (SC): predicts testicular size.

EPD Definitions

Birth Weight (BW)—A sire's EPD (lb) for mature dam equivalent birth weight of calf. Progeny of sires with lower BW EPD values will generally be born with less calving difficulty.

Weaning Weight (WW)—A sire's EPD (lb) for 205-day, mature dam equivalent WW. A sire's WW EPD is an indication of growth to weaning. WW EPD does not indicate milk production.

Yearling Weight (YW)—A sire's EPD (lb) for 365-day, mature dam equivalent YW. The YW EPD is an indication of the progeny's post weaning gain performance. YW EPD is calculated by combining WW and post weaning gain performance to predict expected differences in weight performance at one year of age.

Milk (MK)—A prediction of the maternal genetic component of weaning weight, MK EPD does not directly indicate more or less milk production. The MK EPD is the expected difference (lb), due to maternal performance (which includes milk production) in the weaning weight of calves out of a bull's daughters compared to calves from daughters of a bull with a zero MK EPD. A higher EPD indicates that the bull's daughters should produce more pounds of calf due to increased maternal performance, but a higher MK EPD may also indicate a need for higher nutritional inputs to support increased milk production.

Total Maternal (TM)—The expected overall difference (lb) in weaning weight of calves out of a bull's daughters compared to calves from daughters of a bull with a zero maternal weaning EPD. The maternal weaning EPD is a measure of the genetic component of both growth and maternal ability. It is calculated by adding one-half the WW EPD to the MK EPD, and as a result, TM EPD is the only EPD for which there is no corresponding ACC.

Scrotal Circumference (SC)—Measured in centimeters, SC has been shown to have a strong influence on male fertility, however selection for extremes in scrotal size is not an effective method of affecting change in the trait, as it is subject to extreme environmental variation. While larger actual scrotal circumference is important in terms of how the bull can be expected to perform his duties of servicing cows, only SC EPD predicts the genetic value of the bull for SC that can be transmitted to his calves. Additionally, heifers sired by bulls with high SC EPD have been shown to reach puberty at significantly earlier ages than do daughters of bulls with low SC EPD.

Ribeye Area (REA)—REA EPD is a predictor of the muscularity of an animal's offspring in square inches. The REA EPD presented in this summary is for ultrasound REA as opposed to carcass REA. While there is a high correlation between ultrasound REA and carcass REA, they are not the same trait. Genetic progress for improved muscling is not direct using REA EPD from ultrasound, but still much improved over using actual ultrasound REA measures.

% Intramuscular Fat (IMF)—IMF EPD is presented in units of percent fat as determined by ultrasound. While IMF from ultrasound has a strong positive relationship to carcass marbling scores, they are not the same trait. Genetic progress for improved marbling is not direct using IMF EPD, but still much improved over using actual ultrasound IMF measures.

Fat Thickness (FT)—The ultrasound Fat Thickness EPD is comparable to the carcass Fat Thickness EPD and has the same limitations. In most cases, it is more desirable to select for less fat at the 12th rib, but selection to extremes can result in decreased carcass quality. Like the carcass equivalent, this EPD is measured in inches.

Presenting the 5th Annual
2019 Alex Dees Memorial Foundation
Scholarship Rollover Heifer –

Cuyama Lucy 531E

UB10367539

09/25/2017

The Spanish Ranch bought her sire at the
2014 Dees Bros. Brangus Dispersal Sale
as an amazing bull calf that became
an amazing sire: **Cuyama SR Alejandro 1411**
Her dam is sired by our legendary
Cuyama SR Bright Side 7201T out of a
New Design cow. Fantastic pedigree!
She is top 20% BW, top 25% milk and top 30%
calving ease direct – very maternal! She's solid
and deep, ready for breeding!

The Scholarship provides funds for youth who
participate in the Arizona National Livestock Show to
continue their advanced education. Hands-on
experience prepares our youth for the future of our
industry. Friends and neighbors are welcome
to donate!! The Foundation is a 501(c)3
and all donations are tax-deductible.

El Rancho Español
de Cuyama

Spanish Ranch

Cuyama Brangus & Ultrablack Bulls!!

The Spanish Ranch offers its 2019 selection of yearling Brangus and Ultrablack bulls sired by award-winning Bright Side and Alejandro bulls. All the bulls are calving-ease coupled with high IMF scores. Great phenotypes, excellent dispositions and desert-like range make these bulls the "Best in the West"!

PROTECT YOUR FUTURE

Every day, our way of life is threatened by economic uncertainty, government regulations, drought and more. That is why the Arizona Cattle Growers' Association staff and volunteer leadership work tirelessly to protect and promote Arizona's ranching families.

But we cannot do it alone. Your membership will help ensure that ranching will not only endure but prosper, for generations to come.

Pine Coulee Impressive C351

We are excited to present the first-time offering featuring daughters by **Pine Coulee Impressive C351**.

He was one of the top selling bulls at the 2016 Pine Coulee Angus Ranch Bull Sale in Montana. C351 is a standout for calving ease and end-product genetics, also very correct phenotypically.

TUMBLEWEED BRANGUS

For more information on our Ultrablack replacement females contact Stephen Dunckel @ 209-878-3167.

Caring For Your Newly Purchased Bull!

Whatever system your bull has been evaluated in, young bulls do require an adjustment period prior to being used for breeding. This is referred by some as a “hardening period.” Others refer to it as a “let down” period.

Young bulls, especially those of breeding age, do require attention for continued growth and proper development. Regardless if they are home raised or newly purchased, proper feeding, care and management now will give your bull the opportunity to continue growing and allow him to develop into a sound and profitable herd sire.

Several management practices should be observed when newly purchased bulls are brought home. These practices can help ensure that each new bull has a long and productive future with good productive performance.

- *Have an area with fresh water and good quality hay to keep the bull(s) in upon arrival, so they will have time to settle down and become familiar with the surroundings.*
- *After allowing to drink water and eat hay, you may feed additional energy at approximately 1 percent of body weight.*
- *If you are planning to turn the bull(s) out with the cow herd upon arrival, bring the herd to a holding area and allow the bull(s) to return to the pasture with the herd.*
- *Avoid turning your newly purchased bull(s) in with an older bull. We must reduce the chance of injury.*
- *Consider limiting the number of females you want to settle during the breeding season to 20 the first year.*
- *Avoid excessive loss of body condition before or during the breeding season. You may want to rest him for 1 to 2 weeks depending on the breeding activity of your herd. If necessary, feed him additional energy if excessive loss in body flesh condition is noticeable. Hay and/or pasture alone will not provide sufficient nutrients to meet the requirements of young, growing, active bull(s).*
- *If there is one bull in the pasture, as he breeds the cows, record the breeding date. Non-return to heat is a good indication your bull is settling the cows.*

- *Treat for internal parasites at the end of the breeding season. Provide effective external parasite control as needed.*
- *Remember, bulls are guaranteed by consignors to be breeders only if they are managed correctly after the sale.*

Young bulls should be limited to a minimum number of cows to service. The number is decided by his age. The following guidelines can be used:

Bull's Age	Number of Females
12 to 15 months.....	10 to 12
15 to 18 months.....	12 to 18
18 to 24 months.....	18 to 25
24 months and older.....	25 to 35

Place young bulls in well fenced lots before and after breeding season to keep bulls away from cows in heat. There should be shade and plenty of clean water in each lot. Provide free-choice minerals and routinely treat for parasites.
